Technology Center 2100

Continuation of 3. NOTE: The proposed amendment raises a new issue "a data transmission system comprising a primary board; secondary boards; and a data transmission path carrying out data transmission/reception between the primary board and the secondary board" in the claims 1, 5, 6 and 8, respectively, which has not been considered, and which extends the scope of the claimed invention. Therefore, it requires further consideration and/or search, and will not be entered.

Continuation of 11. does NOT place the application in condition for allowance because:

In response to the Applicant's argument with respect to "The Examiner alleges that Oshikawa cures the deficient teachings of the APA. ... Applicant respectfully disagrees. Applicant has carefully studied Oshikawa's teachings of the high pulse (data enable signal) and low pulse (counter signal), which are not similar to having a cycle signal that would indicate the switching of data and having this cycle signal be combined with the trigger signal. ... " on the Response page 9, line 15 through page 10, line 10, the Applicant's argument fails to comply with 37 CFR 1.111(b) because it amounts to a general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references Oshikawa. In other words, the Applicant fails to explain why Oshikawa's teachings of the high pulse (data enable signal) and low pulse (counter signal) are not similar to having a cycle signal indicating switching of data, and having this cycle signal (i.e., Oshikawa's data enable signal) be combined with the trigger signal (i.e., Oshikawa's counter signal). Thus, the Applicant's argument on this point is not persuasive.

In response to the Applicant's argument that Oshikawa fails to show certain features of Applicant's invention, it is noted that the features upon which applicant relies (i.e., incrementing or generating an address during the time in which the waveform is deformed by the count signal or noise) are not recited in the rejected claims. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Thus, the Applicant's argument on this point is not persuasive
